

#tableView

1. CV is shown on the screen and cannot be changed by client by interacting with it on the phone screen.
2. The data inputted into the CV can be changed by changing swift file CVOwner (any variable) and by adding new images in the plist.
3. If we need more rows in the tableView, we can add a new case in the enum first and then we will add this case to switch inside tableViewDataSource, cellForRowAt.
